SUMMARY

Full-Stack Engineer and recent M.S. in Computer Science graduate with 6 years of experience intersecting software development, system operations, and solutions architecture. I have a practical understanding of how to take applications from concept to production while optimizing for performance, reliability, and security. My background includes designing scalable full-stack applications, implementing NIST-aligned incident response, and executing data-driven system optimizations. Equally effective working autonomously on commercial SaaS applications or contributing to collaborative engineering teams.

SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL (PostgreSQL, MySQL), Bash/Shell Scripting

Backend & Infrastructure: Node.js, Express, Flask, RESTful APIs, Redis, Docker, Kubernetes (EKS), AWS (EC2, S3, Lambda, IAM)

Frontend & Web: React, Next.js, Redux, TailwindCSS, Material UI, HTML5/CSS3, Webpack

Testing & DevOps: Jest, Mocha, Supertest, GitHub Actions (CI/CD), Linux/Unix Administration, Prometheus, Grafana

Architecture & Systems: Distributed Systems, Microservices, Event-driven Architecture, System Design, OOD, Agile/Scrum

PROFESSIONAL EXPERIENCE

The Forge Fitness Studio LLC - Chief Operating Officer (Operations & Systems Analysis) 01/2020 - 08/2024

- Directed end-to-end operations including hiring, onboarding, and workflow optimization, increasing client retention from 50% → 80%.
- Applied solution architecture principles (stakeholder analysis, process modeling, requirement gathering) to translate business needs into system improvements.
- Designed and deployed automated internal data pipelines and event workflows for scheduling, client onboarding, and reporting, reducing operational overhead by 25%.
- Built performance dashboards for KPIs across retention, utilization, and revenue analytics.
- Led financial planning and forecasting contributing to 45% revenue growth and multiple local business awards.
- Managed organizational change by documenting processes, training staff, and driving adoption of new systems.

The Forge Fitness Studio LLC - Web Developer 03/2018 - 01/2020

- Coordinated with stakeholders and cross-functional teams to evolve the fitness platform from MVP to a scalable production system, gathering requirements and delivering key features such as class scheduling, waitlists, and performance tracking.
- Built a scalable leaderboard leveraging paginated and parameterized queries to deliver personalized ranking segments, improving member retention by 35% while preserving low API latency.
- Executed on-page SEO strategies to enhance search engine rankings by optimizing site structure, meta tags, and content for better crawlability, while integrating Google Analytics to increase organic traffic by 120%.

COMMERCIAL SaaS & OPEN SOURCE

The Daily Shred - Co-Founder & Lead Developer (Proprietary SaaS) 03/2020 - Present

- Led architecture and development of a subscription-based B2B2C SaaS platform serving 2,000+ users, aligning system design with business requirements, stakeholder needs, and operational constraints.
- Introduced Redis-based caching and leaderboard system using sorted sets and batch updates, improving API latency ~80% and reducing database load ~90%.
- Implemented experimentation framework using cohort segmentation and controlled A/B testing, increasing email engagement (open rate +90%, CTR +250%).
- Partnered with government wellness programs to define requirements, deliver system demos, and ensure compliance with organizational constraints, enabling adoption and 350% user growth.
- Built KPI dashboards for operational visibility (retention, engagement, marketing performance) enabling data-driven decision-making.

- Collaborated in Agile team to build AWS EKS observability tool, gathering requirements and translating operational needs into system design specifications.
- Designed configurable restart orchestration system for Kubernetes workloads, improving system reliability and operational control.
- Developed namespace-scoped in-memory rate limiting using cooldown tracking to ensure consistent behavior across ephemeral pod lifecycles.
- Built secure authentication system using AWS IAM, kubeconfig, and role-based access control following least-privilege principles.
- Acted as Scrum Master facilitating sprint planning, backlog grooming, and iterative delivery aligned with product roadmap.

TECHNICAL PROJECTS

NLP-Driven SQL Generation Engine | *Node.js, OpenAI, PostgreSQL, Jest*

- Architected an OpenAI-driven solution using NLP to parse natural language inputs into complex SQL queries, automating mock data generation and accelerating development workflows.
- Instituted a secure PostgreSQL database system with safeguards against SQL injection, incorporating query validation and automated testing using Jest and Supertest to achieve 81% test coverage.
- Developed a responsive interface for real-time query visualization and database schema mapping, improving developer hand-off efficiency.

Geo-Spatial Discovery & Matching Engine | *React, PostgreSQL, Express*

- Engineered a performance-optimized matching service using PostgreSQL query tuning, reducing user identification and matching latency by 60% when handling large datasets.
- Optimized frontend performance using React Router for SPA architecture and useRef for refined DOM management, reducing client-side latency by 20% and improving state persistence.
- Implemented refined transitions and user experience workflows, resulting in smoother application navigation and enhanced user retention for hobby-based networking.

EDUCATION

Master of Science in Computer Science | Western Governors University | 2026

- Completed advanced coursework in Artificial Intelligence and Machine Learning, Network Architecture and Cloud Computing, Emerging Computing Systems, Governance, Risk, and Compliance, and Software Architecture and Design.

Bachelors of Science | Oregon State University | 2016

- Major: Exercise Science (*Magna Cum Laude*, 3.79 GPA) - Supplemented with coursework in advanced mathematics (Differential & Integral Calculus, Discrete Mathematics, Applied Differential Equations), statistics, and computational systems alongside independent software engineering practice.
