SUMMARY

Technical systems and solutions professional with an M.S. in Computer Science and hands-on experience managing business operations, configuring software, improving workflows, and translating stakeholder needs into practical technology solutions. Background spans business systems configuration, requirements gathering, process documentation, vendor implementations, customer-facing discovery, open-source engineering, and full-stack and cloud-based software development, backed by strong interpersonal and cross-functional communication skills built through years of direct client, vendor, and stakeholder relationships.

CORE SKILLS

Systems & Business Analysis: Requirements Gathering, Business Process Analysis, Workflow Design, Solution Design, Software Configuration & Implementation, CRM Systems, Process Documentation, Vendor Evaluation, Stakeholder Discovery, Staff Training & Adoption, Reporting & Data Analysis

Software & Development: JavaScript, TypeScript, SQL, React, Next.js, Node.js, Python, Pandas, PostgreSQL, MongoDB, REST APIs, Git/GitHub, HTML/CSS

Cloud, Infrastructure & DevOps: AWS (EC2, S3, IAM, VPC), Docker, Kubernetes, Cloudflare, GitHub Actions, Prometheus

Technical Concepts: Relational Databases, API Integration, Authentication & Authorization, Cloud Architecture, System Design, Observability, Role-Based Access Control, Human-in-the-Loop AI

PROFESSIONAL EXPERIENCE

Independent Web Developer - *Alongside Graduate Studies*

01/2025 - Present

- Gathered requirements directly from business stakeholders and translated business objectives into technical specifications, information architecture, and user flows across five React/Next.js web application launches spanning paid client and founder-led engagements.
- Managed full project lifecycle for agriculture/e-commerce and medical-device clients, from initial discovery and solution design through development, responsive implementation, deployment, and DNS/domain configuration (Cloudflare), serving as primary technical point of contact through client handoff.
- Integrated third-party systems including Mailchimp and Resend for lead-capture and automated email workflows, and configured external checkout/storefront integrations; provided ongoing post-launch support and iterative design updates.

The Daily Shred - *Co-Founder*

03/2020 - Present

- Co-founded and continues to operate a digital fitness subscription service, growing it to more than **2,000 active subscribers** through recurring content delivery and ongoing customer communications.
- Led the proposal and sales cycle for a **paid municipal employee-wellness contract**, including stakeholder presentations, live product demonstrations, and pricing negotiations, and fielded technical and operational questions from decision-makers.
- Own day-to-day service delivery, subscriber support, and digital operations, including building and maintaining the public-facing website in React.

The Forge Fitness Studio LLC - *Co-Founder & Operations Manager*

03/2018 - 08/2024

- Earned repeated local recognition for business performance and customer experience, including Business of the Year (2x), Best Gym (4x), Best Yoga Studio (3x), and Best Customer Service (2x).
- Grew annual revenue to six figures within the first year and sustained **35% YoY growth** leading up to COVID, then adapted operations and managed to maintain profitability through pandemic-related industry shutdowns.
- Analyzed Mindbody churn and customer data to identify retention opportunities and drove operational improvements that **increased monthly member retention from approximately 50% to 80%**.
- Defined functional requirements for a member leaderboard and performance-tracking feature and partnered with FitMetrix engineers through implementation and rollout, contributing to a **65% increase in member engagement** post-launch.
- Administered Mindbody as the platform of record for memberships, pricing, scheduling, booking and cancellation rules, reporting, lead management, onboarding, permissions, and automated follow-up workflows.
- Evaluated and selected technology and service vendors, coordinated implementations, and trained staff on new systems and procedures.
- Built SOPs, documentation, and internal tracking systems for recurring processes, reducing repetitive administrative work and improving operational consistency.

OPEN-SOURCE ENGINEERING EXPERIENCE

PodMD by OSLabs - Software Engineer

09/2024 - 02/2025

- Helped build an AWS EKS observability tool from concept to MVP, monitoring Kubernetes workloads using Prometheus metrics and triggering configurable, threshold-based remediation.
- Built workload-scoped cooldown tracking and namespace- and label-aware restart controls to prevent repeated restart cycles as Kubernetes replaces ephemeral pods, delivering a stable feature set ready for handoff to the ongoing development team.
- Implemented secure cluster access using AWS IAM, kubeconfig authentication, Kubernetes RBAC, and least-privilege access patterns.

SELECTED TECHNICAL PROJECTS

Natural-Language SQL Review Platform | *React, Node.js, TypeScript, OpenAI, PostgreSQL, Jest*

- Developed and then redesigned an LLM-driven PostgreSQL seeding utility around a staged generate-review-execute workflow, separating model-generated SQL from database execution so output can be validated before transactional operations occur.
- Added deterministic policy checks, credential masking, and human approval gates around LLM-generated SQL to reduce unsafe execution risk and keep database credentials outside model-facing workflows.
- Built automated validation achieving **90% line coverage** and **81% branch coverage**, integrating TypeScript enforcement, static analysis, and performance budgets to sustain an optimized production bundle of **375 KiB**.

AI-Powered Legacy Code Modernization Platform | *Python, FastAPI, Pydantic, LLMs, AST*

- Created a modernization pipeline that converts legacy Fortran applications into structured Intermediate Representations before code generation, separating semantic extraction from translation to make migration behavior more inspectable and reduce direct source-to-source hallucination.
- Combined LLM-assisted translation with Python AST analysis and strongly typed Pydantic models to validate structural coverage and detect placeholder implementations, unsupported constructs, and semantic mapping gaps.
- Added a multi-stage validation workflow combining deterministic static analysis with AI-assisted semantic review to identify migration errors that either validation approach could miss independently.

EDUCATION & TECHNICAL TRAINING

Master of Science in Computer Science, Computing Systems | Western Governors University | 2026

- Completed advanced coursework in Artificial Intelligence and Machine Learning, Network Architecture and Cloud Computing, Emerging Computing Systems, Governance, Risk, and Compliance, and Software Architecture and Design.

Software Engineering + AI/ML Immersive | Codesmith

- Full-time, advanced software engineering residency (60+ hours/week) combining rigorous technical coursework, including algorithms and data structures, object-oriented and functional programming, and system design, with daily pair programming, technical presentations, peer code review, and real-world project proposal pitches and development.

Bachelor of Science in Exercise Science, Magna Cum Laude (3.79 GPA) | Oregon State University

TECHNICAL COMMUNICATION

[Database Optimization](#) | Scismic Tech Talk Series 2024

[PodMD - Developers Solution for Custom Kubernetes Pod Restart Configurations](#) | Medium 2024

CERTIFICATIONS

Amazon Web Services: AWS Certified Cloud Practitioner | **Kong: Microservices Professional** | **Atlassian: Agile Project Management Professional** | **PagerDuty: DevOps Professional**
