541-979-8306 | Portland, OR (Open to Relocate) | [mason.meyer@gmail.com](mailto:mason.meyer@gmail.com) | [linkedin.com/in/-mason-meyer](https://www.linkedin.com/in/-mason-meyer) | [mason-meyer.netlify.app](https://mason-meyer.netlify.app)

## SUMMARY

I build software with the perspective of someone who has been responsible for the code, the customer, the team, and the business outcome. As a full-stack software engineer with an M.S. in Computer Science, I bring formal systems training, hands-on experience building SaaS products, collaborative engineering experience, and an understanding of where AI can accelerate development without replacing technical judgement. My background as a customer-facing COO also gives me something many engineers are still developing: the ability to communicate clearly, build trust with non-technical stakeholders, and turn real customer and business needs into practical software solutions.

## SKILLS

**Languages:** JavaScript, TypeScript, Python, C++, SQL, Bash

**Frameworks & Libraries:** React, Next.js, Redux, Node.js, Express, FastAPI, Flask, TailwindCSS, Pandas, scikit-learn

**Databases & APIs:** PostgreSQL, MySQL, Redis, REST APIs

**Cloud & Infrastructure:** AWS EC2, S3, IAM, Docker, Kubernetes, EKS, Linux/Unix

**Testing & Observability:** Jest, Mocha, Supertest, GitHub Actions, Prometheus, Grafana

## PROFESSIONAL EXPERIENCE

### The Daily Shred - Co-Founder & Lead Developer (Proprietary SaaS)

03/2020 - Present

- Led architecture and development of a subscription-based B2B2C SaaS platform serving **2,000+ users**, balancing product requirements, infrastructure constraints, and ongoing operational needs.
- Replaced repeated database-backed leaderboard queries with Redis sorted sets refreshed through five-minute batch updates, trading real-time freshness for faster reads and lower database contention; **reduced API latency ~80% and database load ~90%**.
- Implemented a cohort-based experimentation system for controlled messaging tests, enabling measurable iteration on user engagement and contributing to a **90% increase in email open rates and 250% increase in click-through rates**.
- Partnered with government wellness programs to translate organizational requirements and operational constraints into product demonstrations and platform capabilities, contributing to **350% user growth over ~6 months**.
- Built operational dashboards and reporting workflows around retention, engagement, and acquisition data to surface product performance and support business decisions.

### PodMD - Full Stack Software Engineer (OSLabs Open Source)

09/2024 - 02/2025

- Collaborated on an AWS EKS observability tool that monitors Kubernetes workloads and triggers configurable remediation based on Prometheus metrics and user-defined thresholds.
- Designed restart orchestration with workload-scoped cooldown tracking rather than pod-instance tracking, preventing repeated restart cycles when Kubernetes replaces ephemeral pods.
- Implemented namespace- and label-aware rate limiting to provide predictable restart behavior while preserving isolation across Kubernetes workloads.
- Integrated AWS IAM, kubeconfig authentication, and Kubernetes RBAC using least-privilege access patterns to securely interact with EKS clusters.

### The Forge Fitness Studio LLC - Web Developer

03/2018 - 01/2020

- Co-developed a React, Express, and PostgreSQL platform from MVP through production use, working directly with staff and customers to turn scheduling, waitlist, performance-tracking, and promotional workflows into product features.
- Designed paginated, parameterized leaderboard queries to provide personalized ranking views while limiting query cost as data volume grew, contributing to a **35% increase in member engagement**.

## ADDITIONAL LEADERSHIP EXPERIENCE

### The Forge Fitness Studio LLC - Chief Operating Officer

01/2020 - 08/2024

- Led company operations, financial planning, and team management during a period in which **client retention increased from 50% → 80% and revenue grew 35% YoY**.

- Identified repetitive operational workflows and implemented automation across scheduling, client onboarding, and reporting, **reducing manual administrative work by ~40%**
- Worked directly with customers and staff to identify workflow problems, define requirements, document processes, and drive adoption of new internal systems.

## TECHNICAL PROJECTS

**Natural-Language SQL Review Platform** | *React, Node.js, TypeScript, OpenAI, PostgreSQL, Jest*

- Developed and then redesigned an LLM-driven PostgreSQL seeding utility around a staged generate-review-execute workflow, separating model-generated SQL from database execution so output can be validated before transactional operations occur.
- Added deterministic policy checks, credential masking, and human approval gates around LLM-generated SQL to reduce unsafe execution risk and keep database credentials outside model-facing workflows.
- Built automated validation achieving **90% line coverage** and **81% branch coverage**, integrating TypeScript enforcement, static analysis, and performance budgets to sustain an optimized production bundle of **375 KiB**.

**AI-Powered Legacy Code Modernization Platform** | *Python, FastAPI, Pydantic, LLMs, AST*

- Created a modernization pipeline that converts legacy Fortran applications into structured Intermediate Representations before code generation, separating semantic extraction from translation to make migration behavior more inspectable and reduce direct source-to-source hallucination.
- Combined LLM-assisted translation with Python AST analysis and strongly typed Pydantic models to validate structural coverage and detect placeholder implementations, unsupported constructs, and semantic mapping gaps.
- Added a multi-stage validation workflow combining deterministic static analysis with AI-assisted semantic review to identify migration errors that either validation approach could miss independently.

## EDUCATION

**Master of Science in Computer Science, Computing Systems** | Western Governors University | 2026

- Completed advanced coursework in Artificial Intelligence and Machine Learning, Network Architecture and Cloud Computing, Emerging Computing Systems, Governance, Risk, and Compliance, and Software Architecture and Design.

**Bachelor of Science in Exercise Science, Magna Cum Laude (3.79 GPA)** | Oregon State University | 2016

## TALKS & PUBLICATIONS

[Database Optimization](#) | Scismic Tech Talk Series 2024

[PodMD - Developers Solution for Custom Kubernetes Pod Restart Configurations](#) | Medium 2024

## CERTIFICATIONS

**Amazon Web Services: AWS Certified Cloud Practitioner** | **PagerDuty: DevOps Professional Certification** | **Atlassian: Agile Project Management Professional**

## INTERESTS & HOBBIES

Hiking and Paddleboarding with my wife, son, and blue heeler, Golfing, and Weightlifting.
